

# **Decision Support Services: Working Smarter, Not Harder**

Matt Solum  
*NOAA/NWS Billings, MT*

## ABSTRACT

A growing trend across the entire National Weather Service is the need to provide decision support services to a variety of different customers. Many Western Region National Weather Service Forecast Offices are already doing an excellent job of highlighting potential hazardous weather with significant lead time. However, many offices may not be providing the type of service necessary to satisfy the needs of their end users. This presentation will focus on the tools available to enhance the decision support program in your offices, as well as highlight the ways to work smarter and not harder.
